

Working towards an AIDS Free Generation

*As we observe World AIDS Day help us achieve our goal of an
AIDS Free Generation*

To End AIDS by 2030

We Must End AIDS in Children, Adolescents & Mothers in the Next 5 Years

We've achieved great progress

48% decrease in number of new HIV infections among children between 2009 - 2014

900,000 new HIV infections among children stopped by providing access to ARVs for pregnant women living with HIV since 2009

But the fight isn't over

Children

600 children are newly infected with HIV each day

2.6 million children are living with HIV/AIDS

But only 1/3 have access to treatment

50% of children living with HIV die before their second birthday

Adolescents & Young Women

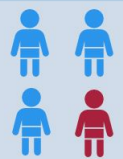

AIDS is leading cause of death for adolescents in Africa

Young women and girls have increased vulnerability to, and risk of, HIV infection

Young women account for 2/3 of new HIV infections among adolescents in Africa

Only 1/4 of adolescents under age of 15 have access to ARVs

Mothers

1.2 million

HIV positive women give birth each year

16 million

women aged 15 years and older are living with HIV

Mothers health and survival is critical to children's health outcomes
