You can use such portfolios as guidelines to help you select the right mix of assets. Ideally, you should increase risk while young and gradually focus on capital preservation as you near retirement. Make regular contributions to your investments after your first one to achieve your financial goals. The upsides of using brokerage accounts to invest include uncapped income and capital investment. On the downside, these accounts are subject to tax on profits or income.

## Overvalued Stocks

A beginner should start investing by understanding the available investment options and determining their motivations

for investing. This will allow them to choose the right assets for achieving their financial goals. If you leave money in your current or savings account, it won't keep pace with the rising cost of living or generate wealth. Instead, it's best to use savings as a way of collecting the capital you need to invest or achieve other financial goals.

There's no one-size-fits-all approach for asset allocation, but knowing the risk-return traits of each investment option is useful. Typically, stocks have the highest return potential but also higher risk while bonds have a lower risk with lower returns. EFTs and mutual funds are also on the lower end of the risk-return ratio.
